

Demining Vest SDV

Art.No. I 100500

Front view

Back view

In preparation for fitting

This armour was developed for customers who require a shorter and lighter version of the accepted apron designs.

The ballistic core is manufactured from Kevlar® for high performance and lightness. A polycarbonate breast plate is incorporated to provide additional protection for the chest area. The cover is made of Cordura® textured nylon which is extremely resistance to tearing or damage from sharp objects. It is water resistant and can be removed for washing.

A collar is provided behind which a standard full-face visor is overlapped.

Side protection is enhanced by abdominal and shoulder flaps.

Groin protection is provided by the deployable genital flap.

The vest is comfortable to wear with the back area covered by netting to allow air circulation.

A low-cost, optional, evaporative cooling system is available if required.

The garment can be donned and removed by the deminer without assistance from another person.
(see diagram)

Rating The armour has a V50 of 450 m/s according to the method of STANAG 2920.
Weight Approximately 2.7 kg depending of additions such as fragment pouches etc
