

Trauma Kit

Art.No. 3100100

Description

The ultimate survival of major injuries is directly dependent on adequate and early resuscitation and stabilization at the scene of the incident, followed by rapid transport to a hospital.

The trauma kit has been specifically designed for use in the pre-hospital resuscitation phase of major trauma caused by high-velocity missiles, land mines, motor vehicle accidents, etc. It contains 50 carefully selected items required to access, treat, and stabilize the person(s) at the scene of the incident, thereby drastically increasing chances of survival.

Features

- Compact, modular design
- Very user-friendly
- Light-weight and portable
- Supplied on a waterproof back pack
- Ideal for use in remote locations
- Easily stored when not in use

The Trauma kit is intended to be used by groups exposed to high risk of serious injury such as:

- Deminers
- NGO field workers
- Military personnel

The Trauma Kit contains sufficient equipment to simultaneously treat two severely injured patients or three to five moderately injured patients.
