

## Wireless Inspection Video Kit CSS-03

Art.No. 2900100

Inspection video search kit for security services, customs, police, and rescuing services.

Inspection kit is intended for conducting the search operations at any time and under conditions when there is minimal ambient light. Consists of video camera and monitor connected via 1.2 GHz radio channel.

Video camera with transmitter and light source are installed in removable anti-shock metallic case and mounted on a lightweight telescopic arm.

The power source is integrated inside the lower part of the arm.

Monitor, receiver and power source is installed inside metallic anti-shock case with handle and flaps. The handle position is adjustable.

Specially designed attachable mini cart is used to

look under the vehicle allowing to move camera in desired direction.

Six powerful LEDs are used as a light source. As an option, IR video head may be ordered. Additionally, system can be completed by the extension rod, which increases the size of inspection complete set up to 3m.

The kit consists of a bag for storage and carrying.

### Technical specification

The three section telescopic arm extends to	1 640mm
